For everything there is a season and
a time for every matter under heaven

a time to be born

and a time to die

a time to plant

and a time to reap

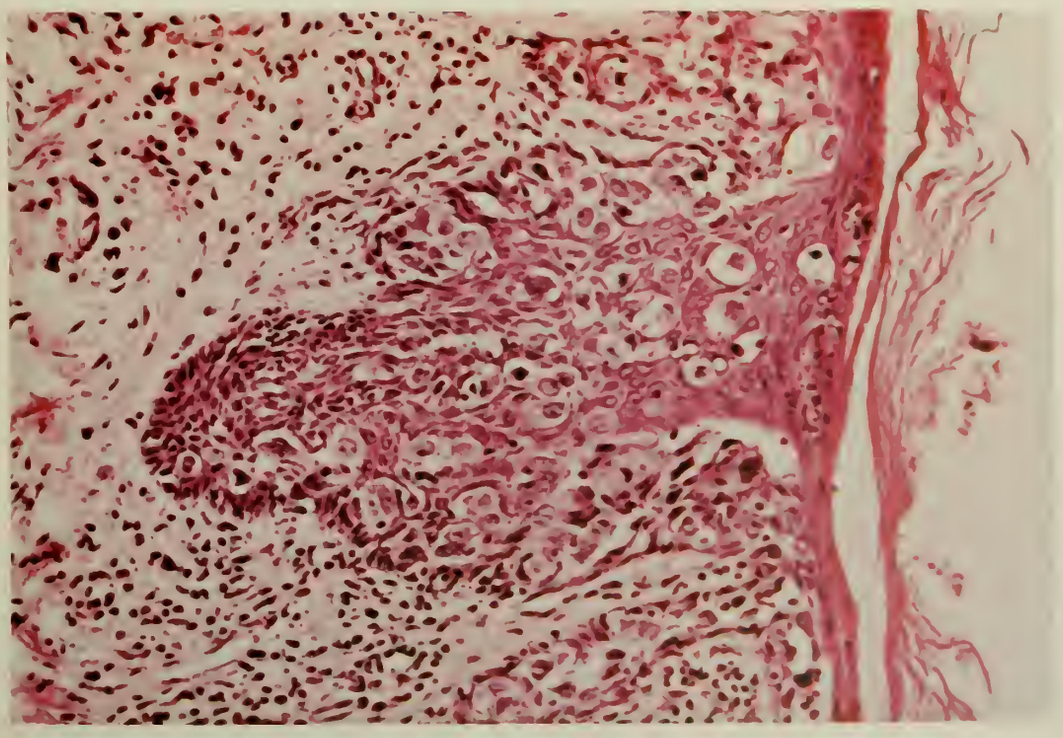
a time to rend

and a time to sew

a time of war

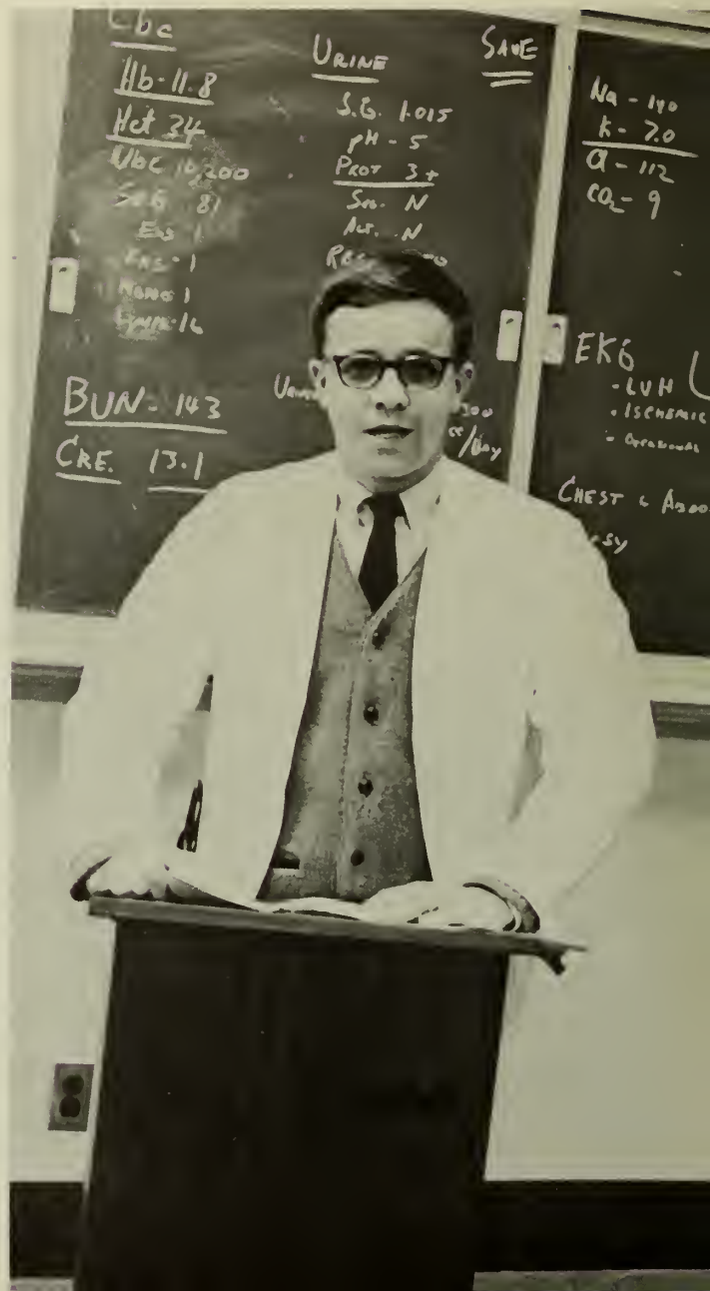
and a time of peace

a time for love



and a time for hate

a time to keep silence



and a time to speak

a time to break down

and a time
to build up

DEDICATION

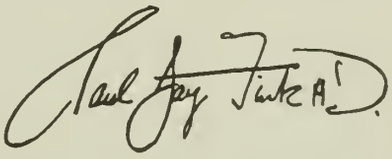
For the teacher, there are very few opportunities to be sure that the students accept and appreciate the effort which he makes. The pleasure becomes greater since your class has taken on a special meaning for me. I have come to know many members of the class personally while helping them with career choices and a multitude of other problems. As a result, I feel that a kinship and friendship has developed in many different ways.

You are about to begin your careers in medicine and to attempt to apply the ideas, concepts, techniques, skills, and attitudes which you have acquired during the past four years. I believe that you are well prepared to deal with the myriad problems of medicine that will confront you. It is in the area of the art of medicine and in the development of your personal medical philosophy and integrity towards patients that you will constantly find yourself revising, amending, and altering your feelings and attitudes. Medicine will provide you with many opportunities to serve suffering human beings, to relieve pain and misery. You will often find your endurance taxed and your tolerance stretched. The conflict between selflessness and selfishness will oft-times make decision-making an extremely arduous task. The struggle between your personal needs and the needs of your patients will be difficult to resolve. Learning to exercise patience, interest, concern, feeling, and caring in the face of harassment, overwork, crises, suffering, and death will be the ultimate test of your ability as a total physician caring for the total patient.

You have a unique opportunity as you enter this profession to combine the ideas and attitudes of your teachers with those individual ingredients of your own selves which will help you to fulfill the calling of medicine in your own special fashion. At the same time, you are entering this profession when the world is on the brink of even greater technological, philosophical, and sociological change. You are not only a citizen of your town, or member of the medical profession, but you are citizens of the world. In the exciting times that are to come, your contribution to the ever expanding and changing world we live in should be a significant one. The rapidity of change, the unlimited opportunities that are before you make it necessary for you to remain ever-watchful of what is going on around you and ever alert to the new, different, special, even the impossible.

I wish to express my deep appreciation to every member of the class of 1969 for the great honor you have bestowed upon me.

I look forward to hearing of your many successes in the coming years, of the honor that you will bring to Hahnemann, and the pleasure that we, your teachers, will feel in knowing that we have contributed in some small part to your development as physicians.



Paul Jay Fink, M.D.

ADMINISTRATION

MEDICAL C

Joseph R. DiPalma, M.D.

DEAN

Dear Doctor:

Now that the real trauma of four years of medical education is over, you may feel that any further words from your old teacher and advisor are redundant. Undoubtedly you are right, and I would not blame you for turning a deaf ear. The rapid pace of social change and almost immediate obsolescence of knowledge lends credence to your attitude.

Yet, let me try to give you some parting words that may inspire some modicum of confidence in a moment of doubt. Have you ever pondered on why the profession of medicine commands respect? Is it really because the physician is a person who has memorized ten million facts and knows how to cope with a variety of medical situations? To a certain extent the answer must be positive. However, the ordinary diagnosis and therapy of disease is less mysterious to the common man than the workings of his television or automobile. If this were the total competence of the physician, then he must be considered to be a technician, rather high class, but still a technician.

The true esteem for the doctor by the public resides in his ability to render sound judgements on matters which concern the lives of men. It is in this respect that he vies with the other great professions: the law and the clergy. Therefore, if you would be among the foremost of your breed, ever cherish and guard the ability to make judgements. Attain and maintain that maturity of mind, that surety of spirit, and that sense of culture which together can guarantee the soundness of a critical mind. Never be so busy, so devoted to your trade, as to neglect the study in depth of man as a human in his expression in the arts, in history, in religion, and in philosophy. Man is not merely an ingenious assembly of plumbing which may be patched and transplanted. Man is man because he is creative, and his creations are more important to him than life itself. Man is the only animal I know of that regularly finds means of killing himself to attain peace of mind.

In this parting, then, I am not telling you simply to be ever a student. Rather more, be a humanist so that you may contribute wise judgements in the social upheaval which now faces us and in those which are sure to erupt even more in the near future. With all good wishes.

Most sincerely yours,

Joseph R DiVaima, MD

PRESIDENT

Charles S. Cameron, M.D.

To the Members of the Graduating Class:

Two thousand years ago, a thoughtful observer of the small world he saw concluded that there is nothing so constant as the phenomenon of change. And now, as never before, the human experience daily testifies to his wisdom.

What he could not have foreseen, of course, is the acceleration of the pace of our change—our bane or blessing, depending largely, I suspect, on one's age. We are privileged or condemned to witness the interment of the "eternal verities," and in the space of a generation we have seen major alterations in valuations of such basic human enterprises as religion, the arts, and morality. These changes are profound, and they are probably irreversible. But one aspect of man's nature appears not to have changed—his imperative to search for facts. While the imperative to question has not changed, the increasing rate of discovery has made many changes possible or inevitable.

We can, if we choose, blast every vestige of life on the earth into total oblivion. On the other hand, it is possible to control the population so that we will not eventually stand shoulder to shoulder on the earth's land.

It is possible to save life and to make that life more productive and happier than ever before. There is, even the troublous prospect that we may soon be able to influence genetic forces so as to produce the kinds of people we decide we need, if such decisions were ever possible.

As you now leave the formal preparation for your life's work, I am suggesting that you reflect, now and then, on your own special role in structuring the era of social evolution. We all now have a voice in this new phase of evolution as contrasted with eons of biological evolution in which the decisions were not ours. In this scheme of social evolution, doctors of medicine can and must chart the course. You are knowledgeable in the vast field of biological science and you know the needs of the human spirit as few men do.

In you are blended these two fundamentals of the human experience—the instinct to understand and control the material aspects of living, and the deep, pervading, less tangible conviction of the need to see a brother in every fellow-traveler on the cosmic odyssey. I beg you to strive purposefully to cultivate these great powers which are yours, and to become activists in the absolutely essential crusade to improve human relationships as well as the health of humans. They are hardly inseparable any more.

For each of you, I most sincerely wish long and robust years, filled with the inner rewards which are uniquely the privilege of doctors of medicine.

Sincerely yours,

Charles S. Cameron

ASSOCIATE DEAN

Hugh D. Bennett, M.D.

To My Friends and Colleagues of the Class of 1969:

Your four years at Hahnemann have been years of change. In four short years you can recall physical change: The Klahr Auditorium, the old library, the Elkins Building, the Nursing School, the Schaff Building, the Hotel Philadelphia, the 16th Street Annex Building, the Feinstein Clinic, the accident ward, the 18th Floor, and finally the demolition of the old college buildings.

In these same short years, you have seen academic growth: the honor code, the first elective programs and their growth, the first psychiatric clerkships, teaching physical diagnosis to freshmen, affiliation with Fitzgerald Mercy, Chester, Harrisburg Polyclinic, Magee, re-organization at PGH, establishment of Community Medicine Department, Clinical Science Course, and the birth of a new curriculum.

You have watched vast social changes occur in medicine: Medicare, Mental Health Programs, Regional Medical Programs, Pennsycare, Pedicare, Health Professions loans and scholarships, SHO, re-birth of SAMA, emergence of specialists as a majority among medical practioners, and the virtual elimination of rotating internships in medical school hospitals.

In this same time, much of what you learned in basic science has become obsolete; and some of what you learned in clinical medicine was already obsolete at the time you learned it, despite the best efforts of the faculty to stay abreast of the scientific explosion.

In the face of such change what, then, can you take from Hahnemann that is real and lasting? To start with, you have an honored diploma which permits you to progress further in your studies. With the National Boards, you will have attained essential licensure and the privilege of practicing medicine.

I believe that you have been provided a good base from which you can launch yourself into the perpetual task of updating and expanding your knowledge. I trust that you have attained efficient habits of study. I pray that you have learned the inestimable value of each human being and have dedicated yourself to the preservation and enrichment of life. I have watched you develop the skills of medicine to a high degree. I sense you have learned that essential mixture of confidence and humility so necessary in the physician.

Lastly, you take with you the human examples which you have encountered and the friendships which you have made. If you take with you only these things, then the years at Hahnemann were worthwhile and your success as a physician is assured. My congratulations on your accomplishments.

Sincerely yours,

Hugh D Bennett

HAHNEMANN HERITAGE

Samuel Hahnemann
1755-1843

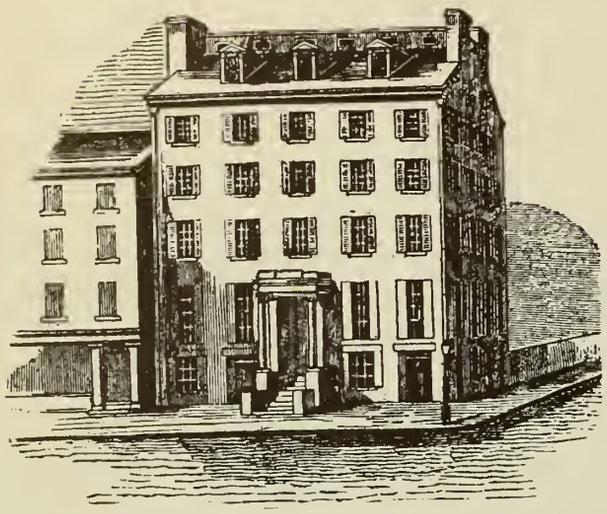
Samuel Christian Friedrich Hahnemann, in 1790, while translating Cullen's *Materia Medica,* attempted to verify the action of cinchona bark by trying it on himself; the drug produced exactly the same symptoms of intermittent fever for which it was prescribed. Hahnemann spent the following years of his life experimenting with the action of drugs on healthy human beings and applying his findings to certain of the sick. Day by day in his medical practice, he became more and more convinced that he was on the verge of a new therapeutic law.

Born in 1755 in Meissen, Germany, Hahnemann had received his medical education at Leipsic and Erlangen; even in his student days, he was dissatisfied with the doctrine of his professors. His early experiences in medical practice confirmed his mistrust in the prevailing methods of treatment based on the assumption that disease was a force which must be opposed by an equal or even greater force. Copious blood letting, violent purging, induced vomitting, laborious prescriptions with a dozen or more ingredients, and corporeal punishment of the insane were all common practices.

In 1810, after years of testing for the definitive action of drugs, Hahnemann published the *ORGANON,* in which he termed his new method of treating disease—Homeopathy, following the fundamental law: *"Similia similibus curentur."* He proposed that the body has naturally endowed powers of combatting disease and that the objective of treatment should be to stimulate these natural mechanisms. He inveighed against assaulting an already depleted organism and prescribed instead single remedies in small doses, carefully selected after painstaking inventory of the patient's symptoms and physical findings.

Hahnemann enjoyed the reputation of being one of the foremost scholars and physicians in all of Germany. Despite great opposition to his revolutionary theory, he was able to obtain a license to teach medicine at the University of Leipsic. There soon gathered about him a circle of enthusiasts, and Homeopathy became a distinct and separate discipline of medicine.

The introduction of homeopathy to the United States occurred in 1825 when Dr. Hans Burch Gram settled in New York City. The first dose of homeopathic medication to be prescribed in Pennsylvania was administered on July 24, 1828 by Dr. Henry Detwiller of Hellertown; a baffling case of retarded menstruation with severe colic was effectively treated by Pulsatilla. In 1829, an epidemic of dysentery was controlled so successfully by the new system, that many allopathic physicians in the counties of Lehigh and Northampton began to embrace homeopathy wholeheartedly.



HOMEOPATHIC MEDICAL COLLEGE OF PENNSYLVANIA
1848

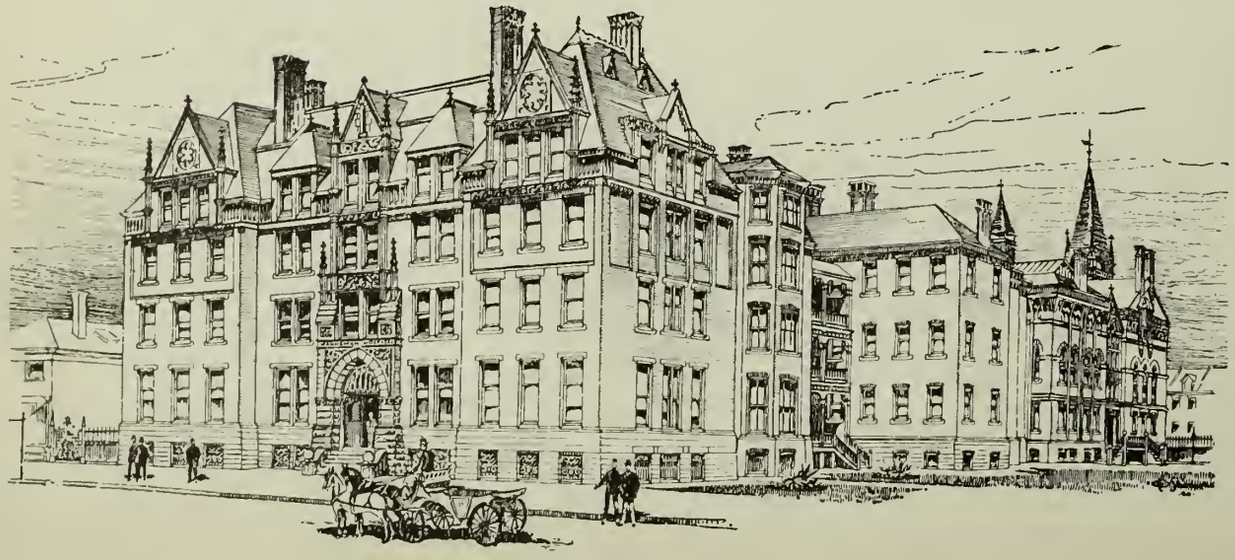
On April 10, 1825, the North American Academy of the Homeopathic Healing Art was founded in Allentown. The faculty consisted of Drs. Hering, Romig, Proeses, Wesselhoeft, Detwiller, Freytag, and Pulte. The course of instruction extended from November to August. The following subjects were taught: physical examination, semeiotics, pharmacodynamics, therapeutics, botany, pathology, physiology, anatomy, zoology, surgery, midwifery, diseases of women and children, medical jurisprudence, phytology, physics, mineralogy, chemistry, geology, astronomy, mathematics, and the history of medicine. Candidates for diplomas were required to pass a *Colloquium,* to present a *Curriculum Vitae,* and to write a dissertation on some medical subject. The academy, however, was short-lived; the main problem was giving medical instruction entirely in the German language, and the lack of funds proved an insurmountable obstacle.

Early in February 1848, Drs. Constantine Hering, Jacob Jeanes, and Walter Williamson met and decided to apply to the Pennsylvania Legislature, then in session, for a medical school charter. It was the desire of these men to found a medical school where students who desired to learn the practice of homeopathy might acquire such knowledge systematically, and not as had been the custom, by serving a haphazard apprenticeship. The charter was granted; and on April 8, 1848, the Homeopathic College of Pennsylvania was incorporated.

A building was leased at 229 Arch Street, a faculty of nine professors appointed; and on Monday evening, October 16, 1848, the opening session of the old college was held. The first year found fifteen students paying the $100 course fee, the $10 anatomy fee, and the $15 graduation fee to attend classes. The year terminated with commencement exercises in Music Fund Hall, at which six doctors were graduated.

The success of the first session demonstrated that more adequate facilities would be necessary if the school were to prosper and grow. During the summer of 1849, a search was made for larger quarters. The opening lectures of the second session were held in the building formerly occupied by the Pennsylvania College of Medicine on Filbert Street between 11th and 12th Streets. Additions were made to the faculty; and at the second commencement, twenty students were graduated.

From the inception of the college, a dispensary for the practical instruction of students had been an integral part. In 1850, the Court of Common Pleas for Philadelphia County granted a charter to the Homeopathic Hospital of Pennsylvania, which was erected on

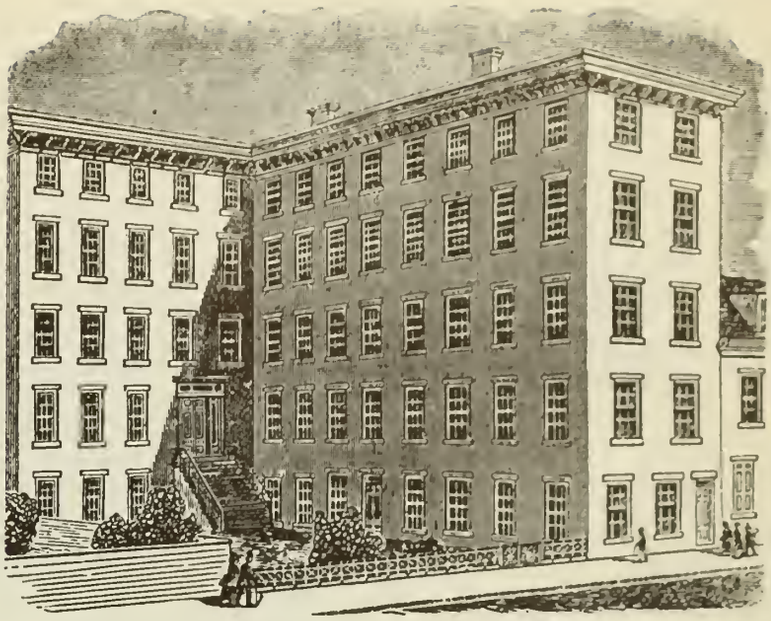


HAHNEMANN HOSPITAL 1887

Chestnut Street and opened in 1852. Two years later, the hospital was forced to close its doors for want of support; and its property was turned over to the Soldier's Hospital during the War of the Rebellion.

Many efforts to organize a new hospital failed until 1862, when a women's association for the management of a hospital was formed. These able ladies started a hospital in the rear of the college building for wounded and sick soldiers. After the war, this hospital likewise closed its doors.

Financial difficulties were partially resolved by making the college a stock corporation. This move, however, allowed one member of the faculty, Dr. Lippe, to become majority stockholder. In 1867, a serious schism occurred in the college when Dr. Lippe arbitrarily abolished the Chair of Special Pathology and Diagnostics. The majority stockholder contended that such instruction was unnecessary for the homeopathic physician, whose therapeutic guide was a symptom totality. In protest, Dr. Constantine Hering resigned from his lectureship, believing that the old college was no longer serving its purpose as a school where students might acquire a homeopathic education as part of a well-rounded medical course.



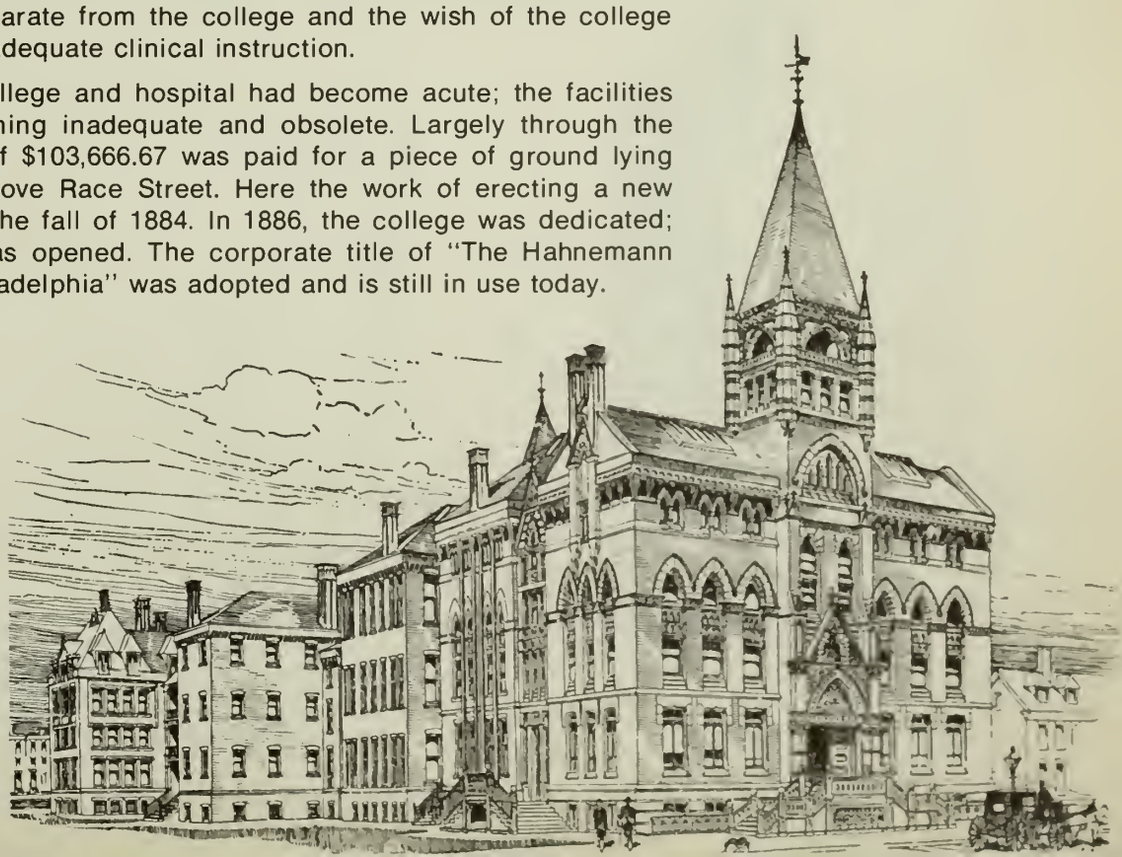
HOMEOPATHIC HOSPITAL OF PENNSYLVANIA 1852

Dr. Hering was able to secure the charter of the Washington Medical College, which had never held classes, and to have the name changed to the Hahnemann Medical College of Philadelphia. The new college began classes on October 13, 1867 at 1307 Chestnut Street. During the session 1868-1869, relations between the rwo rival schools were anything but cordial. Nevertheless, most of the faculty of the old college were in sympathy with Dr. Hering and worked out a plan for union of the two medical schools. Dr. Lippe was convinced by his colleagues to sell his stock to Dr. Guernsey, who was acting incognito as agent for Dr. Hering. By act of the Pennsylvania Legislature on April 2, 1869, the two colleges were legally merged with all rights and privileges of a university. It was decided that the Hahnemann name should be retained as a tribute to the founder of homeopathy.

In the late 1860's, a name appeared in the Hahnemann catalogue, where it would remain for over half a century—Dr. Rufus B. Weaver, Professor of Anatomy. Dr. Weaver achieved national prominence by winning a Gold Medal at the Columbian Exposition for his remarkable dissection of the entire cerebrospinal nervous system.

The need for clinical material and increased facilities led the faculty to hold a fair in Horticultural Hall, which netted the unexpectedly large sum of $17,000. In 1870, a five-story hospital was erected on Cuthbert Street. Contention then arose, centering around desire of the hospital to remain separate from the college and the wish of the college faculty to build an amphitheater for adequate clinical instruction.

By 1880, the contention between college and hospital had become acute; the facilities and equipment of both were becoming inadequate and obsolete. Largely through the generosity of the faculty, the sum of $103,666.67 was paid for a piece of ground lying between Broad and 15th Streets above Race Street. Here the work of erecting a new hospital and college was begun in the fall of 1884. In 1886, the college was dedicated; and in 1890, a 150 bed hospital was opened. The corporate title of "The Hahnemann Medical College and Hospital of Philadelphia" was adopted and is still in use today.

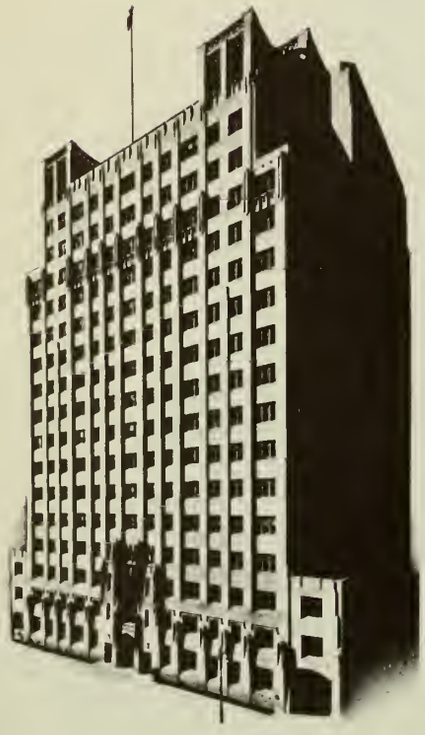


HAHNEMANN MEDICAL COLLEGE 1886

HAHNEMANN MEDICAL COLLEGE 1900

The course of medical instruction originally was ungraded and covered two academic years. During the session 1869-1870, a three-year course was made optional. In 1886, a three-year graded course was required for graduation. A four-year graded course was first offered in 1890 and then made obligatory with the academic year of 1894-1895. In 1906, the office of dean was assumed by Dr. Herbert Northrup, a renowned surgeon and member of the Class of 1889. Dr. W. B. Van Lennep, Professor of Surgery, acceded to the position in 1910 and was instrumental in raising the academic standards to those required of a university teaching hospital.

In 1913, in order to prepare students for admission to the medical college, Hahnemann established a College of Science. A one-year premedical course was offered, which was expanded to two years in 1917. The College of Science continued in operation until 1929 when it was abandoned, largely because hundreds of students who had completed the premedical training applied for matriculation in the medical college. For more than forty years, the hospital and college had contributed their share to the healing of the sick. Just as they had done in the Civil War, Hahnemann graduates and faculty ministered to the needs of the military during World War I. Improvements were made as time passed, but eventually the institution once again began to feel the twinges of growing pains. Negotiations and more negotiations were conducted with the usual number of setbacks; but finally, the college building on North Broad Street was torn down in 1928 to make way for a modern, nineteen-story, 600 bed hospital. The college moved into the hospital building on North 15th Street, where courses were conducted until 1938 when the structure was renovated and partially replaced by a new seven-story wing containing the Klahr Auditorium, lecture halls, and laboratory facilities.



HAHNEMANN HOSPITAL 1929

During the early 1930's, Hahnemann was put on probation as a Class A medical college; too rapid expansion in size and failure to keep pace with newer methods of clinical training resulted in this temporary status. Instruction in the homeopathic disciplines was gradually phased out of the curriculum; the last remaining vestige, an elective course in the history of homeopathic practice, was dropped from the catalogue in the early 1950's. The principle of full-time faculty was promoted in both the preclinical and clinical departments. Research programs were augmented. Old courses were updated, and new courses were added to the curriculum.

Women were first admitted as students in the fall of 1941. During World War II, classes were enlarged slightly to provide additional medical personnel to serve the needs of a nation at war; courses were conducted on a year-round basis. Immediately following the conflict, the corporation acquired the Northwest Grammar School on Race Street, completely renovated the structure, and converted it into a Clinic Building for diagnosis and treatment of ambulatory patients. Dr. Charles L. Brown became dean in 1946, succeeding Dr. William A. Pearson, who had held the office for thirty years. For the next nine years, Dr. Brown guided the reorganization of faculty and curriculum.

The Nursing School of Hahnemann Hospital dates from 1890. The school was located at 15th and Vine Streets until 1963, when a new Nurses' Residence and Classroom Building was completed. The seven-story structure provides living quarters for 185 student nurses, as well as meeting rooms, classrooms, and a library.

Dr. Charles S. Cameron, a member of the Class of 1935, was appointed dean in 1956 and president in 1961. Dr. Cameron has led the institution through more than a decade of development to meet the growing complexities of urban health service. His successor as dean, Dr. William F. Kellow, continued vigorous leadership in faculty affairs until 1967, when Dr. Joseph R. DiPalma, Professor and Chairman of the Department of Pharmacology, became acting dean. Dr. DiPalma, named dean in 1968, is presently guiding the college through its most dynamic period of growth and reorganization. Since June 1962, the administration has been ably assisted by Dr. Hugh D. Bennett, Associate Dean, who has been active in student affairs and the conversion of a classical medical school curriculum into a core basic science and multiple track program.

In 1963, various collections of textbooks and periodicals were consolidated, indexed, and moved into a central library now occupying the old Klahr Auditorium. In 1966, the corporation acquired Eckels College of Mortuary Science on North 16th Street and relocated the basic science laboratories and book store. The Myer Feinstein Polyclinic, containing one of the largest radiation therapy units in the United States, opened in January 1967. In June 1967, the Elmer Holmes Bobst Institute of Clinical Research was dedicated; the sixteen-story structure replaces the Elkins Building and contains general and special surgical suites in addition to research laboratories. During the summer of 1967, a Psychiatric Day Hospital was opened at the Hotel Philadelphia. The Cardiovascular Research Institute, which has pioneered in the medical and surgical treatment of vascular disease, will be relocated in the addition to the hospital. Two floors of the hospital have recently been renovated to accomodate the new psychiatric and pediatric units.

At the commencement of 1921, the degree of Bachelor of Science and higher degrees were first conferred. The Graduate School of Basic Medical Sciences offers integrated programs of formal courses, teaching experience, and research training leading to the degrees of Master of Science and Doctor of Philosophy. The School of Radiologic Technology grants fourteen certificates annually, and the School of Medical Technology offers training leading to the Bachelor of Science degree.

During the summer of 1968, the door of the 80 year old college building on North 15th Street was locked for the last time; the structure is now being demolished, and in its place will rise a nineteen-story tower and eight-story wing. The new medical college building, costing over $32,000,000, will contain a library of 70,000 volumes and 1,200 periodicals, three lecture halls, a 700 seat auditorium, 18 multi-purpose teaching laboratories, and many research laboratories. Other buildings planned for the future include ambulatory patient services, a new teaching hospital, and housing facilities for house staff and students.

Today the 7,700th Doctor of Medicine is graduating from The Hahnemann Medical College and Hospital of Philadelphia. Over 600 faculty members in thirteen departments have taken part in his medical education. He joins over 4,000 living alumni in the care and treatment of the sick.

The Hahnemann Heritage lives on.

FACULTY

GAUDEAMUS

As we pass through our four years at Hahnemann, a few of our professors linger as fond memories in the deep corridors of our minds. The Class of 1969 wishes to express its appreciation to these ten faculty members for their dedication to academic medicine, for their special interest in student affairs, and for their loyalty to Hahnemann. The quality of medical education can only be enhanced as long as mentors such as these continue to instruct future physicians.

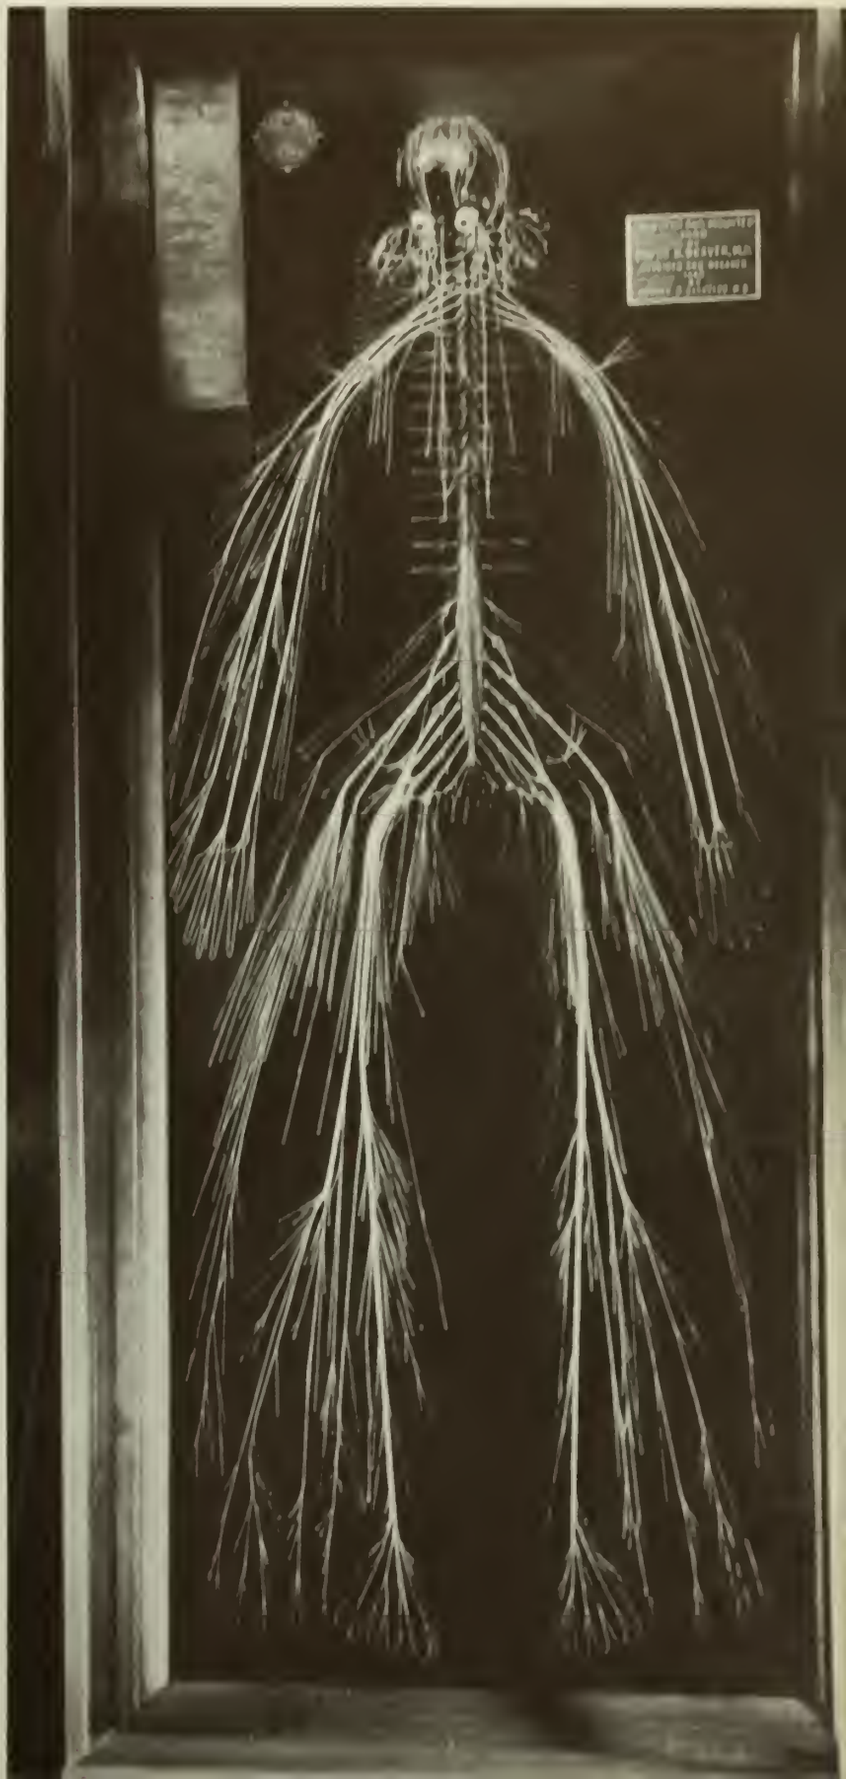
PRECLINICAL YEARS

DR. JOHN H. VAN DYKE "In keeping with the new curriculum, slides of the perineum will be omitted."

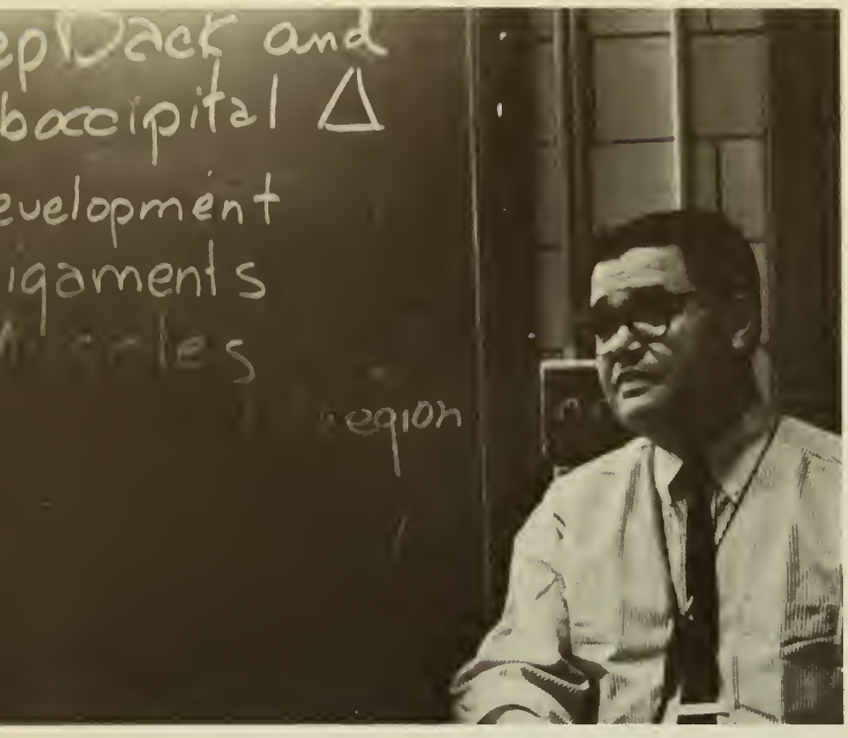
ANATOMY

Each year in early September, one hundred odd students begin the four years of training required for an M.D. degree. First of the scheduled 6,000 hours is traditionally devoted to gross anatomy, histology, neuroanatomy, embryology, and genetics. The cadaver, the slides, the sections, *Gray's Anatomy, Grant's Atlas, Arey's Embryology* . . . it just isn't possible for one human mind to absorb all those facts. But possible or not, the triangle of auscultation, the organ of Zuckerkandl, the circle of Willis, the canal of Nuck, the dance of the chromosomes all make permanent engrams in our cortical computers. The unending series of lectures begin: "Through the Looking Glass," by Dr. Amenta; "Womb to Tomb," by Dr. Augustine; "Honeymoon on the Isle of Risle," by Dr. Showers; and "Mnemonic Plague," by Dr. Van Dyke. Your loved ones shun you, no one sits near you on the subway, party invitations grow scarce, but the odor of formaldehyde lingers on; rumor has it that the smell just wears off in a few years. A slide is a slide, but a good microscope is a thing of joy forever . . . I wonder how much I can sell it for in a couple of years . . . No, you may not take the calvarium home for an ashtray . . . That anomaly, why they would never ask that in the quiz! Old Opticians Often Try Touching And Feeling A Girl's . . . maybe anatomy isn't such a dry subject after all.

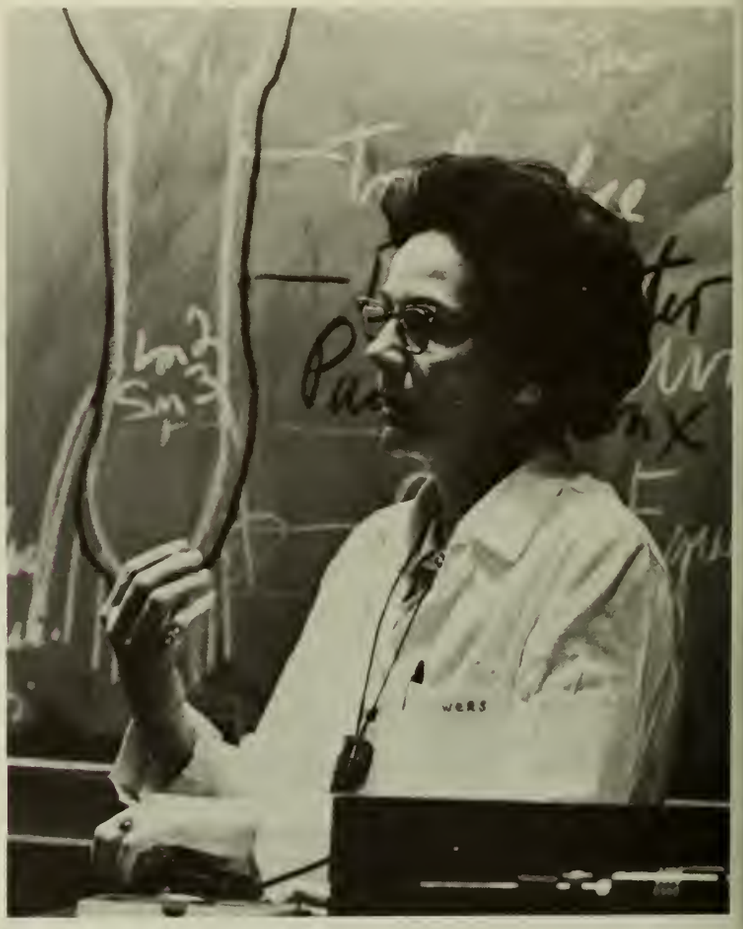
DR. BERWIND N. KAUFMANN "This is one of my more successful genetic experiments."



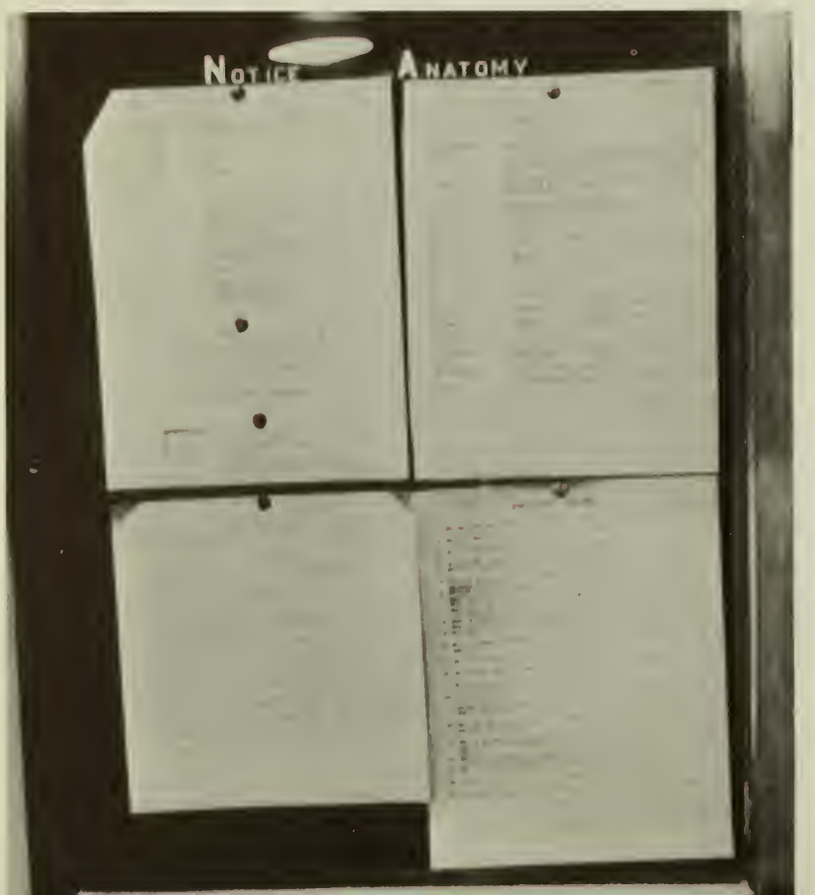
DR. PETER S. AMENTA "You want to know why the Glee Club doesn't have to take the final?"



DR. JEAN MacCREIGHT "When I was a girl, they were still trephining skulls to let out the evil spirits."



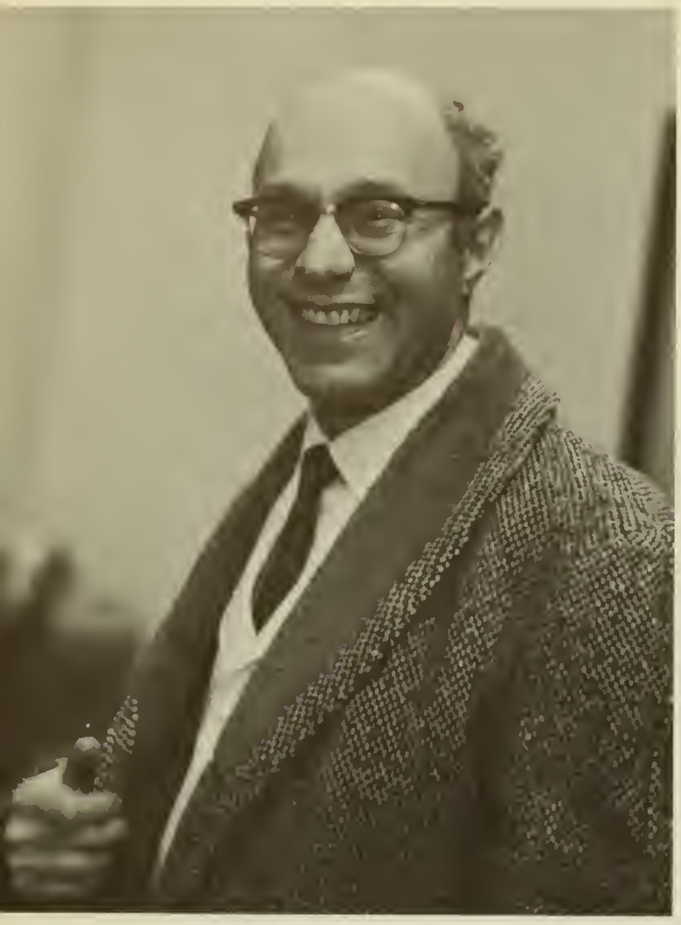
DR. MARY JANE SHOWERS "Remember: fornix is to fornication what the Canal of Nuck is to nookie."



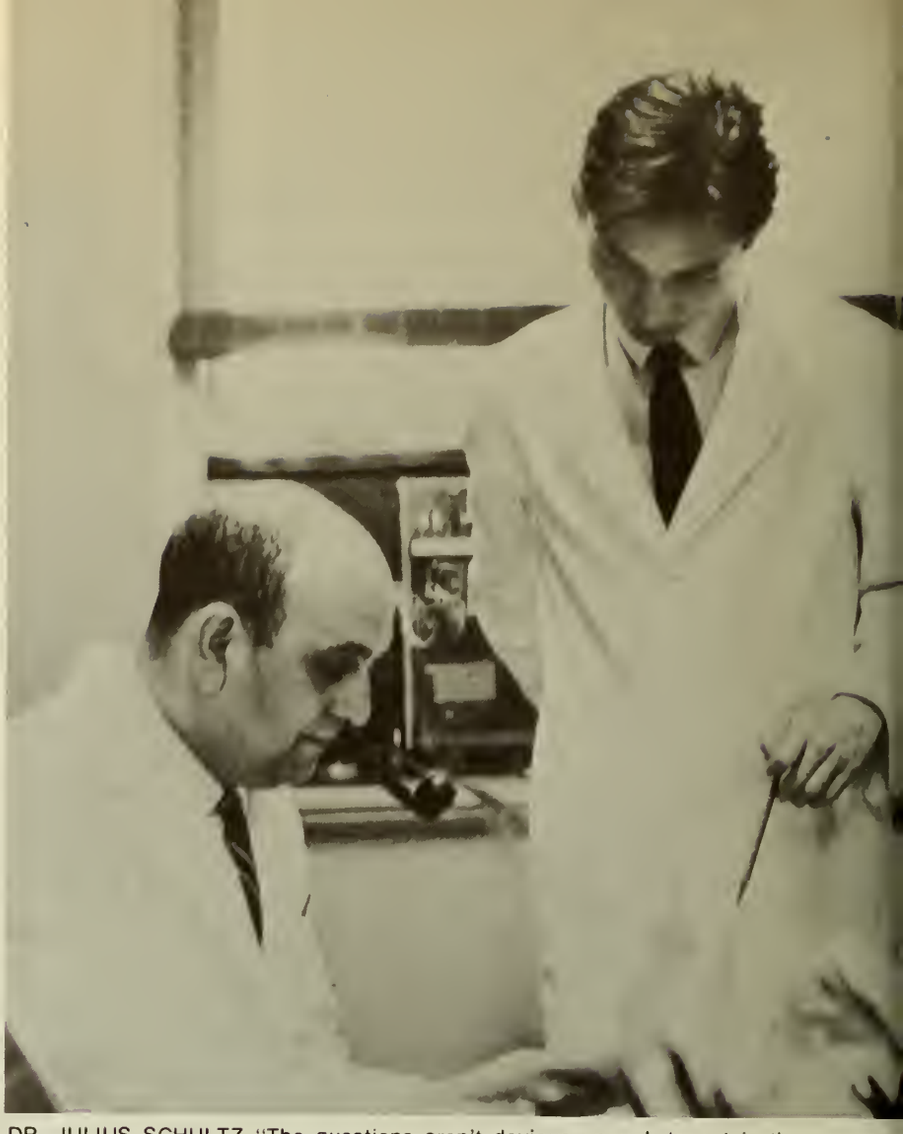
DR. KATHRYN E. FUSCALDO "You definitely qualify for an idiogram."

"*Mister* Igor to you."

BIOCHEMISTRY



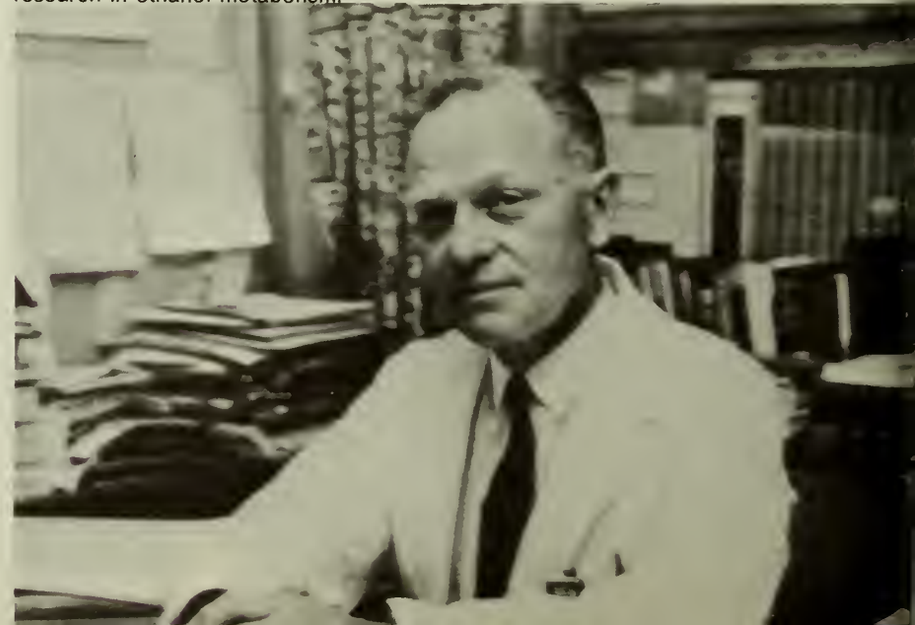
DR. GERT M. JACOBSOHN "At last I'm not going to appear in the yearbook as a soap salesman."



DR. JULIUS SCHULTZ "The questions aren't devious enough to put in the exam."

Enzyme Kinetics, ATP, protein metabolism, DNA, furry bunny rabbits, albino rats—diagnosing and treating patients is a long way off. Laboratory experiments take on new meaning . . . ouch! . . . stick my antecubital vein, not my biceps tendon . . . what is that? . . . a small hematoma, not a thing to worry about. The lectures continue: "I Remember Michaelis and Menten," by Dr. Oesper; "Trickery, Chicanery, and Examination Theory," by Dr. Schultz; "The Power of Positive Nitrogen Balance," by Dr. Boyd; "Danish Operation or Hormone Supplement," by Dr. Jacobsohn; "Metaphysical Machinations of Mitochondria," by Dr. Eichel; "Happy Endings for Incomplete Beta Functions," by Dr. Koser; "Kwashiorkor or Whatever Happened to Baby Jane?" by Dr. Alper; "*Ex Nihilo* Synthesis of Purines and Pyrimidines," by Dr. Alexander; and "Phantasmagoria of Acid-Base Balance," by Dr. Defrates. The Kreb Cycle, the Corey Cycle, the Urea Cycle, the Bicycle . . . no wonder my head is spinning . . . Relax, you only have porphyrin anabolism and lipid catabolism left to learn . . . and there's a whole week before the final exam.

DR. JOHN M. BOYD "Retired? Not at all, I'm conducting independent research in ethanol metabolism."



DR. HERBERT J. EICHEL "I can always get a job with the micro department."

DR. JAMES K. ALEXANDER "I counted 95 students asleep during my last lecture."

DR. JOSEPH S. DE FRATES "Silver Fox? No, I am the Velvet Harpoon!"

DR. PETER OESPER "Very interesting, but that enzyme only exists in the text book."

DR. THOMAS M. DEVLIN "They were looking for someone to put their Krebs Cycle in order."

PHYSIOLOGY

Rheobase, chronaxe, tonus, osmosis, action potential, conduction velocity, synaptic transmission, summation of vectors—physiology-a-go-go was off to a flying start with Drs. Scott and Reed. Kymograph smoked, galvenometer plugged in, electrodes placed, lever attached, cannula inserted, ether cone ready . . . oops! . . . no other dogs, huh? . . . well, I guess we can fill in the data. The little red handbook of physiology gems . . . mercury in your shoes . . . weekly quizzes . . . Drs. McElroy, Appert, Spitzer, mighty men of science . . . long may they experiment . . . Maybe if they change the name . . . The Department of Physiology and Biophysics . . . sounds distinguished . . . and a new chairman . . .

DR. EVANGELOS T. ANGELAKOS "They were looking for someone with good cerebral perfusion."

DR. WILLIAM T. McELROY "The experiment . . . oh what merriment!"

DR. HUBERT APPERT "Just remember that a pithed frog can still pith."

DR. ANN AMBROMOVAGE "Gerald K. stood me up."

DR. JOHN C. SCOTT "Retired? No, I'm helping Dr. Boyd."

DR. AARON A. BECHTEL "Respiratory physiology is a gas."

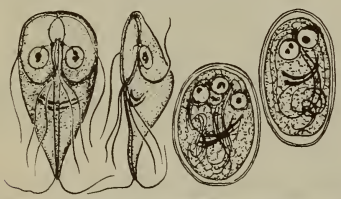
"1:05 P.M., and you need another cat already."

DR. EMERSON REED "That rectal probe made quite an impression."

MICROBIOLOGY

The second year is rapidly in gear; no time to notice that a few classmates have failed to muster. Microbiology offers a personal introduction to the parasites, opportunists, and invaders which cause human disease. Learning the technique of staining is quite informative ... fingers are Gram positive, clothes are Gram negative, and pine needles are acid fast. Insect vectors were stressed ... the housefly, the fruit fly, the black fly, the tsetse fly, the Spanish fly, and the bar fly ... Seminars on Vincent's Angina were held at Abe's Luncheonette.

Amadeo, Bacillus, Coccus, Dermatophytoses, Echovirus, Flagella, Glanders, Hammell, Intestinal fluke, Jungle rot, Kala-azar, LGV, Moat, Neisseria, Opsonins, Phage, Q fever, Rickettsia, Stelos, Treponema, Urushiol, Vaccine, Weidanz, Xenograft, Yaws, Zoster ... every course has its own version of the alphabet. The water in Philadelphia is a meal in itself ... the spirochetes march in four abreast ... never kiss on the lips ... hoof and mouth disease.

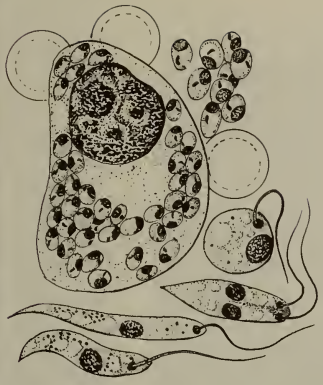


DR. AMEDEO BONDI, JR. "A toast to my son, the real doctor in the family."

DR. WILLIAM P. WEIDANZ "It's great to be misunderstood."

DR. JAY M. HAMMELL "You don't use your finger, that's what the loop is for."

DR. PETER STELOS "It's a good beer, not a great beer, but . . ."



DR. ALBERT G. MOAT "Hugh Heffner is my idol."

DR. RICHARD L. CROWELL "Good things come in small packages."

PHARMACOLOGY

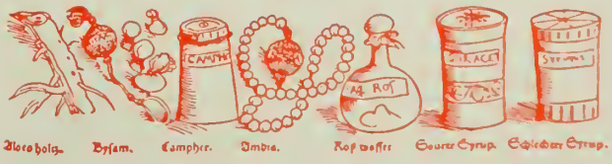
The average student will forget the action of quinidine, but undoubtedly remember the effects of selenium on cattle in Wyoming . . . you ought to see at least one case of the blind staggers in the next twenty years . . . Laboratory in pharmacology is the time to smear burnt cork on your forehead, make corny jokes about Ash Wednesday, and take amphetamine to keep from falling asleep. There are two approaches to the course. The first is to read the text, which is clearly impossible. The second is to stick to lecture notes, which is clearly disastrous. When all else fails, your conference leader will give you the chart summarizing the entire course which can be spread out on any 9′ x 12′ room.
Even if you can't remember the Latin for your prescription, just keep in mind that there is no such thing as 150 cc bottle.

DR. JOSEPH R. DIPALMA "Now dat I loined youse guys drugs, I can take over as the Big Boy."

DR. BENJAMIN CALESNICK "Even if you don't survive the experiment, you still get the $7.50."

DR. G. JOHN DIGREGORIO "What do you mean it's my turn to clean the cages."

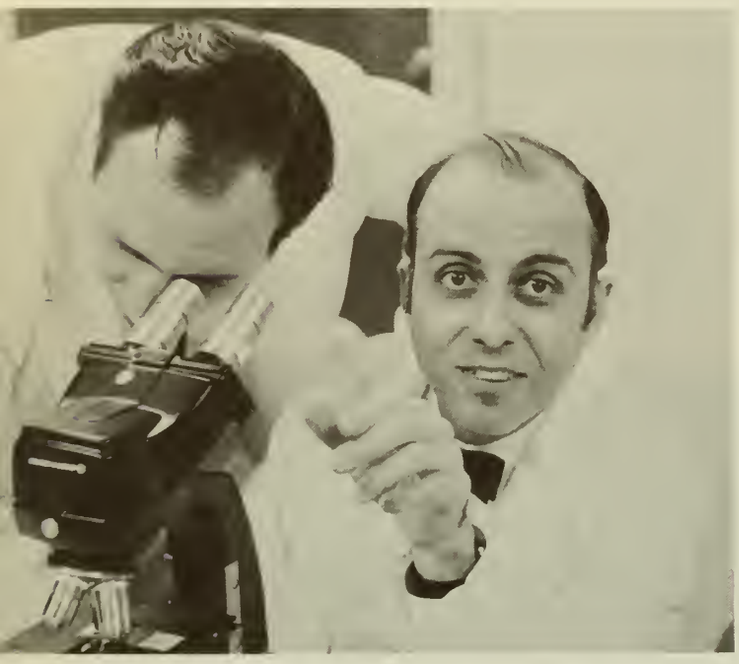
DR. WARREN CHERNICK . . . da new boss



DR. EDWARD I. CIACCIO "Six liters, a new diuretic miracle!"

PATHOLOGY

"My name is Joseph Imbriglia, M.Deity . . ." Four months of morbid anatomy has begun . . . no chart, rhyme scheme, mnemonic, or diagram is overlooked in the attempt to learn all the disease entities which affect man . . . you quickly learn the concept of cortical saturation . . . for every new fact you memorize, one old one is forgotten. The steady diet of nutmeg liver, chicken fat clot, strawberry gallbladder, current jelly thrombus, berry aneurysm continues . . . Several thousand pages and several thousand slides later, you are half way through the course . . . nothing to do now except prepare for the National Boards . . .



DR. ALEXANDER NEDWICH "A veritable case of reactive hyperemia."

DR. E. KARL KOIWAI "I don't see it."

DR. THOMAS K. RATHMELL "I don't care what the Russians say; we invented Pathology."

DR. JOHN M. DOLPHIN "I'm helping Dr. Boyd with his research."

DR. WILLIAM C. KASHATUS "How do I hate thee, let me count the ways . . ."

DR. JOSEPH E. IMBRIGLIA "I-M-B-R-I-G-L-I-A . . . the 'g' is silent as in bologna."

DR. IRENA KOPROWSKA "Have I had my checkup? Hungarians only, please!"

CLINICAL YEARS

SURGERY

While the pentose shunt, the branches of the vagus nerve, the march of the reflex figure, the myriad derivatives of digitalis, the subspecies of the scotochromogens, and the Pickwickian syndrome lived on in our memories, we finally began to enjoy the more leisurely aspects of clinical training: 7:00 A.M. rounds, scut work, night call, morbidity and mortality conferences, etc. . . . First scrub . . . second scrub . . . tenth scrub, all within the first half hour . . . did it right at last . . . first chance to assist . . . suture scissors . . . cut it on the knot . . . you frayed the thread . . . don't cut out the knot . . . cut just above the knot . . . not that long . . . leave a tail on this one . . . no, too short . . . never mind, I'll cut it myself . . . SAVITZ'S LAW: There is absolutely no way to cut a suture correctly.

DR. DEMETRIUS S. SARIS "The Baron renewed my contract."

DR. HARRY S. WEAVER, JR. "PERRLA, EOMI . . . that's all you have to know."

"Procedure? No, they're watching Charlie throw a tantrum."

DR. PETER PELLEGRINO "If he were a thoroughbred in his condition, we'd shoot him."

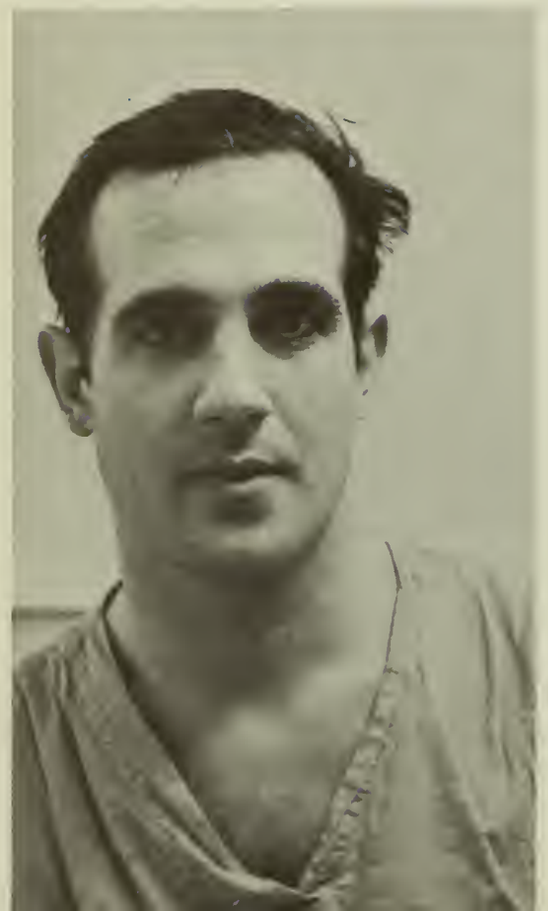
DR. JOHN M. HOWARD "50% burns or not, just git'im up 'n feed'im, boy."

DR. MORTON H. PERLMAN "Doesn't anybody need a surgeon?"

DR. SIDNEY TOBIAS "Don't touch me, I'm STERILE!"

DR. RICHARD M. LEHMAN Mr. Personality

DR. ALBERTO ADAM "Anything Nichols can do, I can do better—including the Bovie."



"Knit one, purl two . . ."

DR. DONALD A. NAGLE "Fired? You must be joking."

DR. ROBERT HANSEBOUT "... and then Dr. Wolferth smashed my radio."

DR. CHARLES SACKS "Did you say it was benign?"

DR. JEWELL L. OSTERHOLM "He can still say five words, huh? 'Who did this to me?' "

DR. PAUL M. JAMES, JR. "Curse you, Red Baron!"

DR. IVAN BARONOFSKY "All I did was fire a few guys."

DR. HOWARD ZIEDMAN "Me, too; you got to be kidding."

DR. AXEL K. OLS

DR. CHARLES C. WOLFERTH, JR. "When I get up to that O.R., you'd better snap to attention."

"Sponge count? No, I feel lucky today."

DR. ROBERT BOWER "When in doubt, cut it out."

DR. ALEXANDER E. PEARCE ". . . and if you still can't get the Foley in, punt."

"Olé! !"

DR. EDWARD D. COPPOLA "I haven't made a mistake since the last time I operated."

MEDICINE

DR. ALBERT N. BREST "How to succeed in cardiology without really trying."

DR. LEWIS C. MILLS and DR. RALPH A. SHAW "I told those dumb kids to buy that stock."

DR. DEMETRIOS KIMBIRIS "They won't renew my malpractice insurance."

DR. ROBERT H. SELLER "Don't you ever call me RAPID ROBERT again."

Diagnosis, Prognosis, Cure—the ancient trinity of medicine . . . the painful beginnings . . . 2 page HPI's . . . asking all the questions in the little blue book for ROS's, PMH's dating prenatally, SH's including political views, FH's back to great grand parents, recording all negatives in PE's, and IMPRESSIONS with a differential diagnosis of every spurious finding . . . inspection, palpation, percussion, auscultation . . . slowly, ever so slowly, the skill, the art becomes ingrained, at least in most of us . . . true understanding of pathophysiology . . . first correct diagnosis . . . first crock . . . CODE 99 . . . managing fevers alone . . . thinking, investigating, deducing . . . evolution of confidence . . . writing orders . . . oneupmanship . . . sharing scut work . . . developing colleagues . . . M.D.

"Where's the cervix?"

"Arcus Senilis."

DR. GIULIO J. BARBERO "This is a disorder of elimination."

DR. GERALD M. FENDRICK The Fuzz

DR. SUMNER R. ZIEGRA "You see it first at PGH."

DR. DANIEL F. DOWNING "All murmurs are guilty until proven innocent."

Every department should have one

OBSTETRICS / GYNECOLOGY

Despite many technological advances over many centuries and the onslaught of modern medicine, women go about begetting in the same way women did in biblical times. The concept of woman as a chronically constipated biped with leukorrhea and backache is certainly not advanced by the OB/GYN Department at Hahnemann. However, dyspareunia is certainly better than no pareunia at all; and the primary indication for hysterectomy is the presence of a uterus. Nevertheless, the miracle of birth remains a miracle in spite of proper analgesia and sedation, sterile preps, and predelivery enemas. To participate in and put the final touches on the creation of a human life can only serve to further dedicate the future physician to his station in life.

DR. DOMANIC I. PONTARELLI "Hope its a boy; the tips are great."

DR. SEYMOUR STEIN "Yes, that's right, don't wait till you're married."

"Ready or not, here I come."

DR. JAMES H. LEE "Senator Dirkson took elocution lessons from me."

DR. GEORGE C. LEWIS, JR. "I am not a douche doctor."

"Call Dr. Fink; we found a dentate vagina."

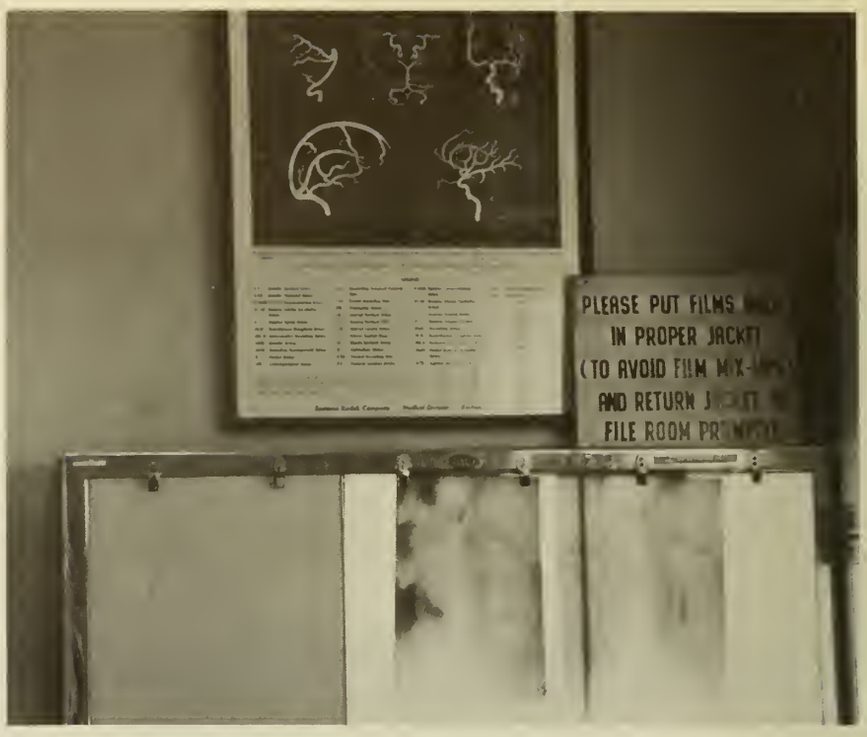
DR. NEIL SILVERMAN "Get married in the morning; if it doesn't work out, you haven't shot the whole day."

DR. MARSHALL KLAVAN "Remember: a professional examination is done with two fingers."

DR. BRUCE V. MACFADYEN "90 year old girl, 10 babies, post-menopausal bleeding . . ."

DR. LARRY McGOWAN "Don't make mirth of the afterbirth."

Malcolm X-ray



DR. J. STAUFFER LEHMAN "Let's see, it is the anode that's negative, or is it the cathode?"

DR. WELLAND F. SHORT "Pretty weak x-ray, just got through her clothes."

DR. KENNETH H. SOLL "Impression: there is definitive radiologic evidence of a beautiful fungating bronchogenic carcinoma."

DR. GEORGE C. EVANS HAWAIIAN EYE

"Tell J.S.L. I run this department."

RADIOLOGY

Much has been done since last year to alleviate the crowded corridors, miniscule viewing rooms, lack of rapport between students and clerks, and poor scheduling of patients. Certainly the staff is ever ready to teach interested students the finer points of the Ace of Spades Sign, Scottie Doggies, Lead Pipes, Honeycombs, and Napkin Rings. And in spite of every imaginable obstacle, the studies get done and are reported accurately.

DR. LUTHER W. BRADY "Zap! ! You're sterile!"

DR. MILLARD N. CROLL "Get up, that table is for x-rays."

PSYCHIATRY

The Id, the Ego, the Superego—the modern trinity . . . suddenly all our regular habits, as well as our idiosyncrasies, take on new meaning . . . drives, defense mechanisms, conscious, unconscious . . . why are you so hostile? . . . why do you ask? . . . why do you resent my asking? . . . Never before and never again do we ask ourselves why . . . don't lose your keys . . . it's the only way to tell the doctors from the patients . . . passive aggressive . . . schizophrenia . . . secondary gain . . . manic depressive . . . blocking . . . flight of ideas . . . flatness of affect . . . la belle indifference . . . now you understand . . . or do you?

DR. MELWYN L. POSTERNACK "So what else should a nice Jewish boy who hates blood become?"

DR. HERMAN S. BELMONT "Children who are afraid of tall buildings often suffer from an edifice complex."

DR. LINDLEY WINSTON "Mrs. Barr smokes Camels . . . very interesting."

DR. PAUL J. FINK "They chose me because of my high score in the Master's Test."

DR. MITCHELL DAVID "Oral fixations can be quite debilitating."

DR. VAN BUREN O. HAMMETT "How do you like my topectomy?"

DR. OSCAR R. WEINER "Mrs. Lincoln and I didn't realize anyone was looking through the two-way mirror."

DR. DON E. JOHNSON "You don't really see a hand writing on the blackboard."

DR. FRANKLIN H. WEST "I'd be happy to take your case; first bring in your income tax return for analysis."

ANESTHESIOLOGY

Passing gas may not be socially acceptable; but to an anesthesiologist, it is a way of life . . . 'Who was that masked man?' is a question often asked in the operating room . . . Is there really someone else under the drapes besides the patient? . . . What is the blood pressure now? . . . better wake up the anesthetist . . . but with all the joking, when a surgeon has to perform an emergency laperotomy on an eighty year old patient with cardiac arrhythmia and marginal renal function, an anesthesiologist is a nice person to have around.

DR. SETH M. FISHER "Rain or shine, we're always here; if it snows, forget it."

DR. ALFRED I. CATENACCI "Local anesthesia? Sorry, not my line."

"So that's what you do on your side of the sheet."

"Did he say 10 gr. or 10 mg.? . . . I'll split the difference."

"I don't believe it, we're out of gas."

IMPULSE

This issue began the second year of a monthly student newspaper at Hahnemann. *Impulse* is sent by mail to all students and faculty and to interested alumni, house staff, and associates of the Hospital. The current circulation is 1,200 copies.

In addition to reporting on current and future school events, *Impulse* offers a unique opportunity for members of the student body, as well as members of the faculty, to voice their opinions on a variety of medical subjects. Editorials, opposing views, photo essays, verse, cartoons, committee reports, and calendar notices are all regular features.

The funding of *Impulse* was provided this year by a grant of $1500 from the Merck Sharp & Dohme Postgraduate Program as a service to medical education.

Dr. G. John DiGregorio was financial advisor, and Dr. Gerald M. Fendrick was literary advisor of *Impulse* this year.

As scapegoat for the staff, Susan Rayna Savitz must bear the blame for the mistakes of others, especially the Chief. For her unflinching devotion to duty, the Editorial Staff has awarded her a free subscription.

Versus," page 4, "Sequal to Distant Lines" "S.H.O.," page 4-5, A budding student movement at Hahnemann "Committee on Black Admissions," page 5,6,and 7, a report on the Negro Student and medicine "Medical Minutia," page 7, for one-upsmanship on rounds "Freshmen Orientation," page 8, a pictorial essay on the opening Exercises of the year "Notable Events," page 10

STUDENT INSTITUTE

The Hahnemann Institute was originated by Dr. Walter Williamson during the session of 1849-1850 for the purpose of acquiring unison in the minds of young men identified with the acquisition of knowledge in medicine. After many years and several transitions, the Student Institute now encompasses a broad well-rounded extracurricular program of activities.

Michael Swank ..... **President**
John D. Lucey ..... **Vice-President**
Martin R. Eichelberger ..... **Treasurer**
Michael Rudnick ..... **Secretary**

The Student Institute, elected by the student body, is charged with administering the student activities fee for the benefit of all the students. President Michael Swank presented the following budget of $6,500 for the 1968-1969 session:

Yearbook	$3,500
Senior Class	150
Junior Class	150
Blue and Gold Ball	450
Spring Picnic	500
Student-Faculty Cocktail Party	350
Medical Minstrels	200
Student Institute Dinners	250
Sports	50
Undergraduate Research Society	100
Advertising	100
Annual Lectureships	100
H.U.W.A. Christmas Party	200
Theatre Parties	350
Miscellaneous	50

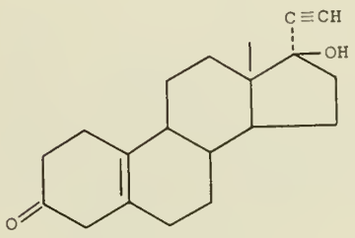
In addition to its regular program, the Student Institute sponsored Victor Borge Night at the Academy of Music to raise money for the Building Fund. The Honor Code Committee now consists of members of all four classes. For the first time, one member of each class has been elected for a term of one year to the College Curriculum Committee with full voting privileges. The officers of the Student Institute have formed a liaison with the Board of Trustees of the Alumni Association to keep them better informed on student affairs. S.H.O. has been officially recognized as a separate student organization at Hahnemann.

Dr. G. John DiGregorio was Junior Faculty Advisor and Dr. Gerald M. Fendrick was Senior Faculty Advisor this year.

The Hahnemann chapter of the Student American Medical Association is considered as a separate sub-committee of the Student Institute. Membership in S.A.M.A. has been placed on a voluntary basis, although the majority of the Hahnemann student body do obtain memberships during their freshman year. Each member receives a monthly issue of *The New Physician,* the journal of the Student American Medical Association. S.A.M.A. also offers special insurance programs and fellowships to its members.

S.A.M.A.

UNDERGRADUATE RESEARCH SOCIETY

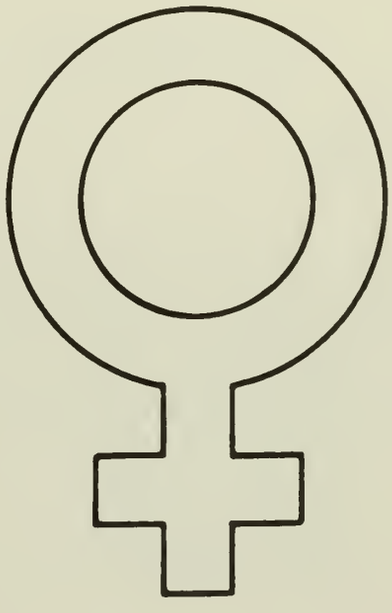


Michael Jay Davidson . . . . . **President**
Louis Rogow . . . . . **Vice President**
Theodore Matulewicz . . . . . **Treasurer**
Roberta Gunnett . . . . . **Secretary**

Twenty-two years ago, an Undergraduate Research Society was organized at Hahnemann to encourage students to expand their medical education by engaging in extracurricular research. Opportunities to do research have increased greatly during the last decade through the organizational and financial support of the faculty and independent research grants. With the institution of a new curriculum, students will have an even greater opportunity to gain research experience, not only during the summer months, but throughout the entire school year. A large number of Hahnemann's recent graduates have participated in one of the many research programs available; and during this past summer, over seventy sophomores and juniors received research fellowships.

From a largely honorary society, whose program of activities were confined to one day—Undergraduate Research Day—the society is now striving to function with a year-round program of activities. The program schedule centers around: (1) the creation of a summer seminar series involving all students engaged in summer research; (2) a quarterly lecture series to be given by distinguished members of the scientific community, both inside and outside our institution; (3) a faculty-student research committee to review and foster the publication of original student research; and (4) Undergraduate Research Day, at which time the ten best papers selected from student research fellowship reports are presented to the school.

This year, for the first time, a Research Manual has been compiled and published to provide interested students with detailed information about projects currently being conducted by Hahnemann faculty members interested in sponsoring student research. The manual should be of value to students who have already begun research projects and desire to communicate with investigators in related fields, as well as to those students who are considering their initial research experience.



H.U.W.A.

The Hahnemann Undergraduate Wives Association is a member of the National Women's Auxiliary to the Student American Medical Association. The two main purposes are social and community service. Our projects are aimed at mutually tying together the wives of medical students at Hahnemann with the community at large. Hahnemann Undergraduate Wives Association offers many varied functions, ranging from flower and fashion shows to holiday parties for children's welfare homes. While providing a warm and friendly atmosphere for the wives to meet, the Hahnemann Undergraduate Wives Association simultaneously derives a great deal of satisfaction in rendering service to others.

A.O.A.

The Alpha Omega Alpha Honorary Medical Society was organized at the College of Medicine, University of Illinois, in 1902. The society comprises three classes of members: (1) Undergraduates to whom membership is granted on the basis of scholarship, personal honesty, and potential leadership; (2) Alumni and faculty membership is granted for distinctive achievement in the art and practice of scientific medicine, and (3) Honorary membership is awarded to eminent leaders in medicine and the allied sciences.

The motto of the society is, "To be worthy to serve the suffering." The spirit of the society is set forth in its motto and in a modern interpretation of the Hippocratic Oath. It is the duty of members to promote its ideals, to foster the scientific and philosophical features of the medical profession, to look beyond self to the welfare of the profession and of the public, to cultivate social-mindedness as well as an individualistic attitude toward responsibilities, to show respect for colleagues and teachers, to foster research, and in all ways to ennoble the profession of medicine and advance it in public opinion.

The most prominent requisite of membership is high scholarship in a broad sense. Scholarship is more than a record of high average grades and facility in memorizing information. It connotes continuous industry, facility in correlating facts and an intellectual grasp that permits application of information to new problems. Equal to these qualities is moral character in its broadest sense, including responsibility and honesty in all affairs, as well as other qualitative factors such as individuality and open-mindedness.

SERPENT SOCIETY

The Serpent Society is the service fraternity to the College, and is made up of Seniors, Juniors, and Sophomores. The Society's activities include: providing students to act as guides for tours of Hahnemann, receiving dignitaries visiting our College, and acting as escorts accompanying Hahnemann Staff members visiting undergraduate college campuses.

PHI DELTA EPSILON

Phi Delta Epsilon is a national medical fraternity with over 60 chapters in the United States and Europe. The Beta Zeta Chapter serves many functions at Hahnemann, both as a social group and as a professional organization. The Fraternity sponsors a biweekly lecture and film series, parties, athletic events, an annual Aaron Brown Lecture and Dinner, and many other activities. The Fraternity is socially and professionally active in conjunction with other Phi Delta Epsilon Chapters and Graduate Clubs in Philadelphia and in other cities. It also offers a loan program and scholarships to needy students.

PHI LAMBDA KAPPA

Phi Lambda Kappa Medical Fraternity is a national and international organization composed of medical students and graduate physicians across the United States, Jamaica, Europe and Asia. The Medical Students Aid Society is the philanthropic arm of Phi Lambda Kappa offering interest-free loans to medical students, augmenting the growth of medical facilities at several institutions and fostering many other charitable activities. At Hahnemann, the Alpha Beta Chapter partakes of an active and varied social and academic program throughout the year. The wives' club, a part of the National Women's Auxiliary to the Phi Lambda Kappa Fraternity, is also prolific in staging charitable and social functions. The more than one hundred undergraduate members of our Fraternity enjoy a close and rewarding relationship with the Philadelphia Alumni Club and strong ties to the national organization.

"You may fill in: male, female, or my mother never told me."

It takes a brain and a half to get through Hahnemann.

FRESHMEN

"You're a great class," Dr. Hugh D. Bennett, Associate Dean, told Hahnemann's Class of 1972 as the three-day orientation session ended. Tacitly, 116 heads nodded.

After all, a record number of us had not been graduated from college. Further testifying to our collective good sense, only 20 per cent had tied the knot that binds. While 67 per cent of us came from the Pennsylvania environs, we were not totally parochial: Karen Miura hails from Colorado, Roger Bitar from Oregon, and Gene Shippen from Florida.

We were new; we were fresh. But if, on that early September morn, psychotonic visions of necrosadism danced in our heads; our naivete by cool October had, alas, given way to a morphinistic attentiveness during gross anatomy lectures.

Some odd facts on '72: Ester Mascaro is one of fifteen children (N.B. one mother); Steve, age 25, and Phyllis, age 29, Baer are the only husband and wife medical student team; we have two vegetarians, one graphologist, a Ph.D. candidate from Nigeria, and twelve women students.

"One textbook costs $20.00 . . . he must be kidding."

"Before reading this manual, take two aspirin; for repeat headache, darvon is recommended."

"I said, 'Just a little of the top.' "

"Just because we share the same box doesn't mean you can use my tie to dust the slides."

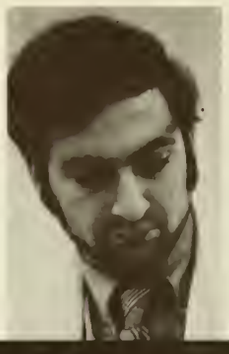
SOPHOMORES



What a difference a year makes! Any resemblance or facsimile to persons seen in Classroom B is purely factitious. Only the names have been kept to protect the faculty. Bearded and mustached, with fresh vigor and uncompromising zeal, we entered the world of bugs and drugs. Immediately polarized after the first micro quiz, the class was divided into two schools of thought: "tell it like it is" vs. "don't Rock the boat."

We had our interesting moments: class meetings and our Talmudic Scholar, Community Medicine and the Thesaurus, Dr. Moat and his "bar flies." At least we could still laugh at the inappropriate. And we made it through; some to their surprise, others to their satisfaction, but most in spite of themselves.

"What do you mean Italians have medial strabismus?"

On to Pathology, that dreaded ogre voraciously awaiting to "rape and devour" the unsuspecting and the weak. We prepared for the conflict with thick skin and pointed barbs, ready to battle against the final obstacle; but we were neglectful of the elements. How could a mere medical student anticipate an indoor dust storm or a frigid gust, which came when neither he nor his professors expected?

This year of trials and tribulations is history now, for tomorrow will take us to the Golden Promised Land of the Clinical Years. Are we fantisizing? Where we expected lions, did we find lambs?

"Mirror, mirror, on the wall . . ."

"@ #$*/&%¢+ BUGS!!"

"Somehow they all look the same to me."

"I don't think it's nice to watch while they're conjugating."

JUNIORS

"Now they tell me you have to wear a glove."

"About my own research in the field . . ."

In September, following a two year history of cephalgia, colitis, diaphoresis, and neurogenic bladder, we became clinicians. Resplendent in white, although ignorant of the art, we were suddenly turned loose on the unsuspecting patients. Our initial fears were real for we had only worked with animals for the past two years and our cure rate was not spectacular. But our feelings of purpose and relief at having escaped the preclinical years intact and functioning spurred us ever onward. We were given first call in the hospital and became the selfless, vigilant healers, ready to minister to the needs of our patients. The novel rewards of the obligation faded as time progressed and as fatigue, boredom, and increasing gluteal pain came along. Our enchantment waned even further during the long nights in the hospital and the endless days in clinic.

However, we had yet to reckon with the Multiple Track System, a variation on the theme "Cast your fate to the computor," which is currently in vogue at Hahnemann. We filled in the data cards with our vital statistics and were punched out and fed into the infamous Hahnemann Computor. The Brain, in turn, swallowed the information, buzzed its circuits for a while, and regurgitated our senior schedules along with the names and phone numbers of five other students who would be our Ideal Mates. So we chose our major tracks, clinical laboratories, general electives, and finally selected our free electives. Most of us translated the idea freely and arranged our electives as far away from Hahnemann as possible.

". . . and if tuition were cut fifty per cent, we would need only half the student loan fund."

"Another 5:00 P.M. admission, huh?"

"I said breathe, not burp."

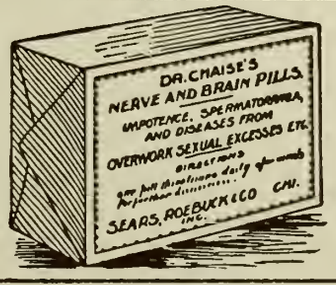
A. COOPER & HARDENBURGH,
Chemists, Kingston, N. Y.

THAT which makes **KINDLY MEN** whom wives and sweethearts adore, FREE. JERSEY INST., Jersey City, N.J.

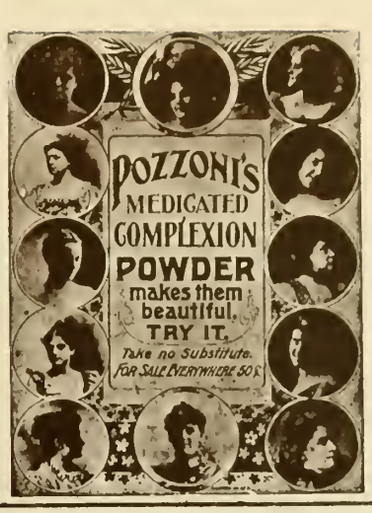


MRS. WINSLOW'S SOOTHING SYRUP

for fifty years has been used by millions of mothers for their Children while Teething. It soothes the Child, Softens the Gums, Allays all Pain. Cures Wind Colic, and is the best Remedy for Diarrhœa. 25c. a bottle.

BROWN'S BABY-TENDER, or Magic Spring Cradle, assumes ten different forms, affords immense relief to mothers, and saves the expense of a nurse. If mothers generally knew its great value, they would deny themselves one meal a day to procure it.—S. Angell, Supt. Home for the Friendless, 29th St., N. Y. Send for Illustrated Circular.

BROWN & CO., 483 Broadway, New York.



Friendly Regard

is never entertained by the children for a medicine that tastes bad. This explains the popularity among little ones of

Scott's Emulsion,

a preparation of cod-liver oil almost as palatable as milk. Many mothers have grateful knowledge of its benefits to weak, sickly children.

DYSPEPSIA AND FITS.

A sure Cure for these distressing complaints is now made known in a "TREATISE ON FOREIGN AND NATIVE HERBAL PREPARATIONS," published by DR. O. PHELPS BROWN. The prescription furnished him has cured everybody who has taken it, never having failed in a single case. It is equally sure in cases of Fits as of Dyspepsia; and the ingredients may be found in any drug store. Those who are afflicted with Consumption, Bronchitis, or Asthma, may also be cured by the use of my Herbal Preparations. I will send this valuable prescription free to any person on receipt of their name. Address, DR. O. PHELPS BROWN, No. 19 Grand Street, Jersey City, N. J.

CONGRATULATIONS TO THE SENIORS

"Some acquire good judgement the hard way, by trial and error at particular expense, in all senses, to the patient; others acquire it by continuing study of the written word from reliable sources, by association with and observation of those of proved good judgement, and by unending constructive criticism of their own work and experience."

CHARLES LENTZ & SONS

Surgical Instruments

Once upon a time at Random College, there was an aggravexed yearbook staff. They had huffed, and they had puffed. They had hustled, and they had bustled. They had waited for delivery with anticimpatience. When the book arrived, they were conflummoxed!

A bromide or a bore just wouldn't wash any more with the discriminating student body at Random. So Wm. J. Keller Inc., having a special reputation to uphold in the yearbook field, was called in to cut the mustard.

The Keller-produced book had a look: "THE LOOK OF THE BOOK." The new annual had individual identity, character, and class. It was splendiculous compared to the wipe-outs produced for Random by the previous osteocephalic publishers.

Actually, Keller craves the opportunity to have a hand in producing the posher, more elegantly stylized books. We get a charge out of doing annuals with soul and substance. That's because from Norfolk to Minneapolis, Keller is known as the House of Contemporary Creativity.

The Wm. J. Keller firm brings together the grooviest contingent of highly trained craftsmen, beautilitarians, and hypo benders. Our preference is to use the finest papers and superlative inks. Production is by the Velvatone process, which Keller perfected especially for printing yearbooks.

A unique service plan is customized to individual schools, and the most conscientious gentlemen of the road in the business are available to aid our yearbook staffs, should problems arise. If needed, hocus-focus artists can be provided by Keller to tackle some available-light photographic assignments.

The end product of this potpourri of service and talent is a superior, polished yearbook. It is an annual in which the staff, the school, and, above all, the student body can take justifiable pride because of its CONTEMPORARY CREATIVITY.

Incidentally, Random College told Ad Hoc U. about Keller, and both staffs had smooth sailing ever after. The Keller knight in your area is *Robert P. Davine.*

but as for me
I know that my redeemer liveth
and at the last
he will stand upon the earth
and though worms shall devour my flesh
and my bones be as dust
yet shall I see for myself
and my eyes shall behold him
and not as a stranger
